

Concrete Repair Services

With SealTech, safeguarding mechanical integrity means your facility is operational.

At SealTech, we take our commitment to minimizing your assets downtime very seriously. Each and every aspect of your facility must be able to perform at peak efficiency in order for your business to remain productive. That's why our services extend far beyond our competition. We offer a wide range of concrete repair services that will allow your personnel to work in surroundings that are truly safe and sound.

Facilities are continually faced with the destructive influence of chemicals and other elements leaving concrete structures in constant need of repair and protection.

As a leading specialty mechanical provider, SealTech offers solutions to some of the most difficult problems, with a range of epoxy and urethane repair materials and protective coatings that can withstand many of the aggressive chemicals found in facilities.

SealTech can repair:

- Chemical containment areas
- Pump plinths and vessel supports
- Effluent treatment pits, bio-reactor clarifier tanks
- Drain channels and waste water treatment pits

SealTech also provides resistance to a wide range of chemicals including:

- Inorganic and Organic Acids
- Alcohols
- Alkalis
- Hydrocarbons
- Oils

SealTech utilizes state-of-the-art materials, repair methods, tools and trained technicians to repair and restore concrete surfaces and structures.

We have a proven track record of managing everything from complex jobs to more standard, day-to-day plant requirements. Put SealTech's experience to work for you.

Trusted. Reliable. Safe.
